

AMENDMENTS TO THE CLAIMS:

Please amend claim 9 and add new claims 14-22 as follows. The changes in these claims from their immediate prior version are shown with ~~strikethrough~~ or [[double brackets]] for deleted matter and underlines for added matter. A complete listing of the claims with proper claims identifiers follows.

1-8. (Canceled)

9. (Currently amended) A method for making a tissue sheet having increased bulk and visual aesthetics using a raised pattern felt comprising the steps of:

- a) forming paper making fibers into a basesheet;
- b) bringing the basesheet into contact with a patterned felt made from a water-holding substrate joined to a carrier, the carrier having the pattern stitched into it with a stitching material forming a plurality of projections;
- c) pressing the basesheet against the patterned felt to form a pattern in the basesheet; and
- d) drying the basesheet.

10. (Original) The method of claim 9 wherein the drying step is partially accomplished by transferring water from the basesheet into the felt during the pressing step.

11. (Original) The method of claim 9 wherein the basesheet is pressed against a heated drying cylinder and dried to a final dryness while maintaining the pattern in the web.

12. (Original) The method of claim 11 wherein the heated drying cylinder is a Yankee dryer.

13. (New) The method of claim 9 wherein the stitched pattern allows the flow of water through the stitching material into the water holding substrate.

14. (New) The method of claim 9 wherein the stitched pattern comprises multiple distinct images.

15. (New) The method of claim 9 wherein the stitched pattern depicts butterflies.
16. (New) The method of claim 9 wherein the height of the stitched elements is at least 10% of the combined thickness of the substrate and the carrier.
17. (New) The method of claim 9 wherein the felt comprises a hydrophobic flow-control material.
18. (New) The method of claim 9 wherein the pattern is stitched into a carrier which comprises a hydrophobic flow-control material.
19. (New) The method of claim 9 wherein the pattern is stitched into a spunbonded nylon material treated with a hydrophobic chemical composition.
20. (New) The method of claim 9 wherein the tensile strength reduction due to the pattern in the basesheet is less than 30% of the tensile strength of the same basesheet made without the pattern.
21. (New) The method of claim 9 wherein the stitched pattern is made from yarn.
22. (New) The method of claim 9 wherein the stitching material is compressible.
